

**HUMAN ERROR** 

# **PROBLEM**

Enterprises face design challenges due to conflicts with real-world topography which can cause task breakdowns, rework, delays, and high investment.

Surveyors work in RISKY AREAS

leading to INJURIES

Rapid pace of technological advancements

CONTINUOUS TRAINING of teams.

# SOLUTION

# A fully integrated system to automate large-scale topography tasks.

Cut your cost with efficient timelines while supporting on-site workforce well-being.

- ✓ Automated planning software
- ✓ Task time calculation with machine learning
- ✓ Real-time task progress monitoring
- ✓ Precise location tracking

- ✓ Al-driven scenario validated for autonomous driving
- ✓ Offloading labour from physical tasks
- ✓ High-precision data collection.
- ✓ Patented.

IoT-enabled access to 3D laser scanners, total stations, and mobile robots.

## **MARKET OPPORTUNITY**

Our system automates complex surveying tasks across multiple industries, this offers scalability and drives growth opportunities.

#### LAND SURVEY EQUIPMENT MARKET

# **REAL CASE**

Paid operation field run to validate the market.

40%

more effectiveness

90%

more reliable estimate

67%

less labor shortage

60%

less human error

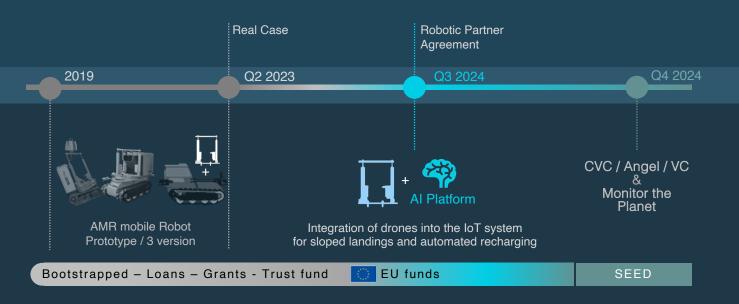

# **ROADMAP & MILESTONES**

With a long-standing knowledge base in the field, we created a unique IoT and AI combination.

# COMPETITION

## **USE OF FUNDS**

Cost-effective in complex topography automation.

Cross Selling Opportunity
Clients trust our brand and services.

We are a seasoned team that does complex topography tasks.

European Funds back us.

Our team was chosen for a prestigious program by a leading innovation hub and other institutions in advanced manufacturing

+ CIM4.0 Competence Industry Manufacturing 4.0
